PROFESSIONAL SUMMARY

Full stack developer and AI engineer with 3+ years of experience designing software solutions: LLM-powered automation pipelines, RAG systems, serverless cloud architectures on AWS, and full stack web applications. Skilled at turning ambiguous, real-world problems into reliable, automated systems, from document intelligence with OCR to vector search, workflow automation with FastAPI, and infrastructure provisioned as code with Terraform. Comfortable across the stack in Python, Java, C#, JavaScript, SQL, React, and Tailwind CSS.

TECHNICAL SKILLS

Frontend: React, JavaScript, HTML5, CSS3, Angular, Tailwind CSS

Backend: Python, Java, C#, .NET, REST APIs, MySQL, Supabase

Cloud & DevOps: AWS (Lambda, API Gateway, S3, CloudFront), Terraform, Docker, Kubernetes, MongoDB Atlas, SQL Server, Firebase, CI/CD

AI & Data: RAG Pipelines, LLM Integrations, Vector Databases, OCR, Applied AI, Data Science

Security: Kali Linux, Ethical Hacking, Web App Firewalls, Network & MITM Analysis, SAST (Semgrep, Bandit)

Tools & Testing: Git, GitHub, VS Code, Jest, JUnit5, Pytest, Selenium, Cypress, Postman

EXPERIENCE

AI Automation & Backend Developer

2026 – Present

Equifax

- Design and build AI-powered automation pipelines to avoid manual USA employees screening workflows using Python, FastAPI, and Tesseract OCR.
- Built a Gemini-based LLM analysis pipeline that reads and normalizes records into structured output for direct, automatic ingestion into internal systems.
- Architected a RAG-based flow that analyzes and cross-references data from multiple sources using AI-driven retrieval.
- Built a standalone application that scans inbound emails and PDF attachments to automatically detect and count applicants per requisition, replacing manual review.

Technical Support Specialist

2022 – 2025

Shyft Global Services

- Developed internal tools and automated business processes using Python, C#, and their deployment on Salesforce, improving workflow efficiency and reducing case processing time by 35%.
- Provided IT, hardware, and network support for routers, switches, Broadcom and Cisco devices, including configuration, troubleshooting, and deployment.
- Configured network equipment using PuTTY, working with VLANs, switches, Cisco routers, and network connectivity across internal and field environments.

Customer Service Representative

2021 – 2022

Amazon CRC

- Assisted U.S. Amazon employees with COVID-19 medical leave processes, improving handle time by 30% while maintaining strong customer satisfaction metrics in a high-volume, high-pressure environment.
- Resolved complex employee inquiries by analyzing case details, following internal procedures, and providing accurate solutions in a fast-paced environment.

FEATURED SOFTWARE SOLUTIONS

506Tracker Cloud — d1ybo6ldrc0wgn.cloudfront.net/

Serverless, cloud-native bus-tracking platform for Costa Rica. FastAPI on AWS Lambda behind API Gateway, React frontend served through S3 + CloudFront, MongoDB Atlas for data, Firebase Auth, Stripe for payments — entire infrastructure provisioned as code with Terraform.

AWS Lambda · API Gateway · S3 · CloudFront · Terraform · FastAPI · Python · React · MongoDB Atlas · Stripe

WAF Code Tester — waf-code-tester.vercel.app/

AI-assisted application security platform: runs static analysis (Bandit, Semgrep-style rule sets) on GitHub repositories or local code provided by the user to flag vulnerabilities, then an LLM chatbot with RAG answers questions about the findings with concrete remediation steps grounded in the actual codebase.

FastAPI · Python · Bandit · Semgrep · SAST · RAG · AI · Docker · JWT

QHIT Quiz — quiz-proyect-seven.vercel.app/

AI-driven quiz platform built around a RAG pipeline: teachers author quizzes and the system generates questions directly from source material, while students compete live over WebSockets. Two role-based experiences delivered on a Scrum cadence.

React · Vite · Python · FastAPI · AI · RAG · WebSockets · MongoDB Atlas

Scriptia — Literary Chatbox with AI — bot-literario.vercel.app/

Retrieval-Augmented Generation assistant that answers questions strictly from a curated literary library (Project Gutenberg texts). Weaviate handles vector search and embedding-based semantic retrieval behind a conversational interface.

React · Vite · Python · Flask · Weaviate · RAG · Vector Search · AI

Shoey — Sneakers E-Commerce — shoeystore.runasp.net/

Full-stack e-commerce platform for sneakers built with ASP.NET MVC 5, using Entity Framework 6.2.0 (Database First/EDMX) and Microsoft SQL Server. Implements customer and seller workflows, product catalog and inventory management, shopping cart, checkout, order processing, and seller administration.

.NET Framework 4.7 · ASP.NET MVC 5 · C# · Entity Framework 6.2.0 · SQL Server · Razor

Love House — Freelance Solution

Freelance full-stack web platform developed for a non-profit organization, designed to support its digital operations and community engagement. Built with a FastAPI/Python backend and React frontend, with PostgreSQL for relational data, Redis for caching and performance optimization, Cloudflare for edge security and delivery, and Firebase for authentication and supporting services.

FastAPI · Python · React · PostgreSQL · Redis · Cloudflare · Firebase

Sports Betting Platform

Dynamic sports betting application built with ASP.NET Core (.NET 9), consuming live sports data from TheSportsDB REST API, running on a MySQL backend with C#, and tested end-to-end with Postman.

.NET Core · C# · TheSportsDB API · MySQL · AWS

EDUCATION

System Engineering — Universidad Centroamericana de Ciencia y Tecnología	2022 – Present
English Studies Certificate B2+ — Centro Cultural Británico	2020 – 2021
High School Diploma — Centro Educativo Adventista Bilingüe de Costa Rica	2016 – 2020

CERTIFICATES

- Java Essential Training — LinkedIn Learning
- Java Advanced 2 — LinkedIn Learning
- Learning C# — LinkedIn Learning
- C# Advanced: Object-Oriented Programming — LinkedIn Learning
- Fundamentals of Mathematics: Useful Everyday Applications — LinkedIn Learning
